

Net Report Case Studies

Net Report in Summary

Net Report helps enterprises turn deployed security systems into effective enterprise Knowledge and Protection. Net Report offers integrated security information and Database management, and a real-time risk analysis and alerting solution for early warning of security threats and forensic Regulatory Compliance.

Case Studies

Customer Example: Compliance

Customer: A large Supermarket Chain.

Customer Needs: Rapidly needed to implement log collection, storage, monitoring and reporting to comply with Sarbanes-Oxley.

Net Report Solution: Net Report collects event information from your Firewalls, Proxies, Intrusion Detection Systems and critical server operating system logs. Net Report's system performs the initial analysis and notifies analysts of the real attacks to vulnerable systems. Net Report Dashboard Reporting (via PDF and HTML Reports) is used to generate daily and monthly reports that are disseminated to compliance stakeholders and kept on record as proof of due diligence. Net Report is a centralized solution providing you with a blended view of security and network metrics to effectively manage threats.

Advantages: "Net Report streamlined our security operations, fulfilled Sarbanes-Oxley, COBIT and ISO 17799 audit trail requirements (Sarbanes-Oxley Sections 103, 302, 304, 308, 404, 409, 802, 1102,; COBIT Delivery and Support Objectives, ISO 17799 Sections 6, 8, 9 and 12), enabled information system activity review to be performed at a reasonable cost and increased protection without additional required headcount" stated the Company Risk Manager.

Customer Example: Automisation

Customer: Pharmaceutical Organization

Customer Needs: Seek a product to cover all their security devices (firewalls, Proxies, IDS...) and treat a huge volume of data. "Our IT Team spend hours pouring over logs looking for exploits. We can no longer manually analyze the reams of log data produced by our security devices".

Net Report Solution: Centralized Business Intelligence, highlights true threats and attacks, correlates real-time events and alerts you to quickly and easily mitigate security breaches. Net Report automizes the process from end-to-end, which saves your IT Team from manually analysing logs. Net Report brings you breadth and depth of knowledge – covering a wide range of security devices and drill-down data.

Advantages: "Net Report's all-in-one solution now means that we get real added value out of our investments in firewalls, Proxies, IDS and Anti-Viruses and automate the analysis and alerting of malicious events in real-time. What we especially liked about Net Report is that the alerting system can generate a set of actions based on the type and severity of the event," said the Manager of Security Operations. "I am e-mailed when a key host is under attack. This means that my team is on top of critical events, each member has access to the Net Report Web Portal with the reports and tools we need to rapidly resolve them."

Customer Example: Real-Time and Forensic Analysis

Customer: Large Government Agency

Customer Needs: To detect, receive reports, react and resolve in real-time yet with the possibility of performing forensic analysis.

Net Report Solution: Net Report offers a centralized collection, analysis, alerting and reporting solution to seamlessly integrate in your Internal IT controls investigation workflow. This significantly reduces the time between detecting an attack and resolving it. All Net Report's tools are available in real-time (reporting, alerting) and old logs can also be "replayed" through the system for forensic analysis. This means that you have single solution or both real-time monitoring and forensic investigation with a consistent set of interfaces and functions.

Advantages: "What we particularly appreciated with Net Report is that the user can move between real-time monitoring and forensic analysis with a single click of the mouse. Events from any time period can be viewed thanks to Net Report's intricately chronologically linked (daily and monthly) Dashboard Reports. All our users have access to the Net Report Web Portal which means that we can all generate real-time reports whilst benefiting from the historical trending options."

Customer Example: Daily Department-Specific Dashboards

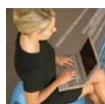

Customer: International Operator

Customer Needs: Create meaningful data to prove that the IT infrastructure is being well-monitored and protected.

Net Report Solution: Net Report's centralized collection, analysis, alerting and reporting suite produces an automated stream of information and real business intelligence. The stream is directed, Dashboard Reports are created in PDF (and HTML) and e-mailed to each key business group in your enterprise on a daily basis. This means that each department receives daily updates and monthly overviews on the enterprise's security position for each of their major assets and business processes. For example, your IT Security team receives the statistics on attack sources, exploit types and cases managed, navigation is easy thanks to Net Report's unique intricate hyperlink system which takes you directly to the information you need. Upper management can therefore hone in on information that summarizes the overall security health of the corporation as well as the efficiency of the security operation. The Auditors and Board members can independently validated corporate-wide security information. Net Report provides both pre-defined and customizable reports that can be run in real-time or on a scheduled basis (e.g. to be sent in PDF format by e-mail to the parties concerned).

Advantages: "Net Report is a real one-stop-shop for us, their dashboards address each line of business of our respective security positions! Our Senior management, Board, Audit team and Security Staff receive reports on a daily basis. Net Report have literally turned around our internal IT security management!"

Customer Example: Log Archiving and Replay

Customer: Leading Insurance Group

Customer Needs: Seek a Log Archival and Forensic Replay solution.

Net Report Solution: Net Report collects event information from all your enterprise security devices (Firewalls, IDS, Proxies, Anti-Viruses, Anti-Spams, RAS, Web Servers, Windows Event Viewer Application, Security and System logs). Net Report safely stores these logs in their "raw" format for long-term storage in its Log Archive product. Net Report Log Archive is a reliable vault for Security, Regulatory Compliance and legal evidence. Net Report Log Replay enables you to replay any log at any time for forensic purposes.

Advantages: "Net Report's Log Archive and Replay products, met COBIT audit trail needs, ensured safe and certified storage and increased our Enterprise Data Protection" stated the Bank's Manager of Security Operations.

Customer Example: Employee Web Surfing Marshal

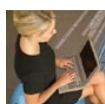

Customer: Large Industrial Company

Customer Needs: Seek a product to monitor employee Internet Usage. A company Internet policy is in place, however certain employees are suspected to have gone against company policy.

Net Report Solution: Net Report enables companies to survey company internet usage, thus monitoring employee visits to forbidden sites (e.g. gambling, sex, pornography, pedophilia, political...) and illegal actions performed which could endanger the company. Net Report follows user traffic and enables you to provide 24/7 evidence to support a court case before a tribunal.

Customer Quotes: "Thanks to Net Report we were able to put the finger on illegal company Internet surfing and reduce our business risk, increase our productivity and protect our Company's reputation!" stated the company's Chief Security Officer.
